

## Example 12 Checking the 2nd and 3rd order terms of Calzetta etal.

The following calculations show that my results for the RNC connection agree with those of Calzetta etal. to third order terms.

Note that I take  $\nabla_{ab}$  to be  $\nabla_a (\nabla_b)$ .

Note also that  $(LCB) R_{abcd} = -(Calzetta) R_{abcd}$ . Consequently, I replace  $R_{abcd}$  with  $-R_{abcd}$  in the Calzetta expressions (done as a Cadabra substitution rule).

This is relatively straightforward. We just apply a few carefully chosen applications of the first and second Bianchi identities.
