```
1 {a,b,c,d,e,f,g,h,i,j,k,l,m,n,o,p,q,r,s,t,u#}::Indices(position=independent).
2
3 \nabla{#}::Derivative.
4 \partial{#}::PartialDerivative.
5
6 # rules for covariant derivatives of v
7
8 deriv1 := \nabla_{a}{v^{b}} -> \partial_{a}{v^{b}}
9         + \Gamma^{b}_{d a} v^{d}.
10
11 deriv2 := \nabla_{a}{\nabla_{b}{v^{c}}} -> \partial_{a}{\nabla_{b}{v^{c}}}
12         + \Gamma^{c}_{d a} \nabla_{b}{v^{d}}
13         - \Gamma^{d}_{d b a} \nabla_{d}{v^{c}}.
14
15 # second covariant derivative of v
16
17 expr := v^{c}_{b a} -> \nabla_{a}{\nabla_{b}{v^{c}}}. # cdb (ex-0205.101,expr)
18 save := @(expr).
19
20 # apply the rules, then simplify
21
22 substitute (expr,deriv2) # cdb (ex-0205.102,expr)
23 substitute (expr,deriv1) # cdb (ex-0205.103,expr)
24 distribute (expr) # cdb (ex-0205.104,expr)
25 product_rule (expr) # cdb (ex-0205.105,expr)
26 canonicalise (expr) # cdb (ex-0205.107,expr)
27 substitute (expr,save) # cdb (ex-0205.108,expr)
```

The trick here is to introduce in line 17 a dummy left hand side, $v^{c}_{b a}$, that is invisible with respect to the substitution rules of lines 8 and 11. Thus lines 22 and 23 will only target the right hand side of `expr`.

Notice how a copy of the initial expression is made in 18. This is used later in line 27 to replace the dummy object $v^{c}_{b a}$ with $\nabla_{a}{\nabla_{b}{v^{c}}}$ but this time acting on the left hand side of the rule. The result is a rule for second covariant derivatives.
