## Exercise 3.10 Example of repeat=True in a substitution

Without repeat=True only the first match in a product will be susbstituted.

```
 \begin{split} & \texttt{ex-0310.foo.001} := AB + ABAB + ABABAB + ABABABAB \\ & \texttt{ex-0310.foo.002} := A + AAB + AABAB + AABABAB \end{split}
```

But with repeat=True then all matches in a product will be susbstituted.

```
 \begin{split} & \texttt{ex-0310.bah.001} := AB + ABAB + ABABAB + ABABABAB \\ & \texttt{ex-0310.bah.002} := A + AA + AAA + AAAA \end{split}
```
