Exercise 6.1 Evaluate - without rhsonly = True

```
{\theta, \varphi}::Coordinate.
{a,b,c,d,e,f,g,h#}::Indices(values={\theta, \varphi}, position=independent).

\partial{#}::PartialDerivative.

V := { V_{\theta} = \varphi, V_{\varphi} = \sin(\theta) }. # cdb(ex-0601.100,V)
dV := dV_{a b} -> \partial_{b}{V_{a}} - \partial_{a}{V_{b}}. # cdb(ex-0601.101,dV)

evaluate (dV, V) # cdb(ex-0601.102,dV)
```

Notice how evaluate has been applied to both the left and right hand sides of the rule.

$$V_a = [V_\theta = \varphi, V_\varphi = \sin \theta] \tag{ex-0601.100}$$

$$dV_{ab} \to \partial_b V_a - \partial_a V_b \tag{ex-0601.101}$$

$$\Box_{ab} \begin{cases} \Box_{\theta\theta} = dV_{\theta\theta} \\ \Box_{\varphi\theta} = dV_{\varphi\theta} \\ \Box_{\theta\varphi} = dV_{\theta\varphi} \end{cases} \to \Box_{ab} \begin{cases} \Box_{\varphi\theta} = \cos\theta - 1 \\ \Box_{\theta\varphi} = 1 - \cos\theta \end{cases}$$

$$(ex-0601.102)$$

$$\Box_{\varphi\varphi} = dV_{\varphi\varphi}$$

Exercise 6.1 Evaluate — with rhsonly = True

```
{\theta, \varphi}::Coordinate.
{a,b,c,d,e,f,g,h#}::Indices(values={\theta, \varphi}, position=independent).

\partial{#}::PartialDerivative.

\text{V} := { V_{\theta} = \varphi, V_{\varphi} = \sin(\theta) }. # cdb(ex-0601.200, V)
dV := dV_{ab} -> \partial_{b}{V_{a}} - \partial_{a}{V_{b}}. # cdb(ex-0601.201, dV)
\text{evaluate} (dV, V, rhsonly=True) # cdb(ex-0601.202, dV)
```

This is an improvement, only the right had side has been expanded into components.

$$V_a = [V_\theta = \varphi, V_\varphi = \sin \theta] \tag{ex-0601.200}$$

$$dV_{ab} \to \partial_b V_a - \partial_a V_b \tag{ex-0601.201}$$

$$dV_{ab} \to \Box_{ab} \begin{cases} \Box_{\varphi\theta} = \cos\theta - 1\\ \Box_{\theta\varphi} = 1 - \cos\theta \end{cases}$$
 (ex-0601.202)
